

# FIFRA Section 2(ee) Recommendation

FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF WASHINGTON

EPA Reg. No. 73049-409

## SPLIT APPLICATION ON APPLES FOR INCREASING THE LENGTH OF FLOWER/FRUIT PEDICEL

This FIFRA Section 2(ee) Recommendation Expires on December 31, 2028.

### DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

This recommendation is made as permitted by FIFRA Section 2(ee) and has not been submitted to or approved by the U.S. Environmental Protection Agency. This 2(ee) recommendation contains directions for use, which do not appear on the package label and must be in the possession of the user at the time of ProVide® 10SG Plant Growth Regulator Soluble Granule application. Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label.

Crop	Objective/Benefit	Application Timing/Use Directions
Short-Stemmed Apple Varieties	To Increase Length of Lateral Bloom Pedicels	Apply 17.5 to 35 ounces (500 to 1000 grams) of <i>ProVide</i> 10SG per acre in an application volume of 100 gallons of water per acre (125 to 250 ppm). Applications can be made as either a single application between the tight cluster and first pink stages of bud development or as a split application with half of the used product applied at tight cluster and the other half applied at pink stage of flowering. Applications made earlier than tight cluster have not been shown to be effective. Applications made later than first pink can result in elongation of king bloom pedicels and exaggerated elongation of fruit. The addition of a nonionic surfactant has been shown to improve performance. NOTE: Do not treat for cracking suppression apples that have received <i>ProVide</i> 10SG applications to increase length of lateral bloom pedicels during the same growing season.
<b>Not for Use in California</b>		

For all other use directions, including timing of applications, refer to the EPA registered label.
